# Agrofuel target

## Scientific body of European Environment Agency asks to suspend 10% agrofuels target

The scientific advisory body of the EEA is composed of 20 independent scientists from 15 EEA member countries. In their communication, the scientific committee especially states that:

"*Biofuel production based on first generation technologies does not optimally use biomass resources with regard to fossil energy saving and to greenhouse gas reduction.* ***Technologies for direct heat and electricity generation should be preferred*** *because they are more economically competitive and more environmentally effective than biofuel production for vehicles"*
