Gene Editing Myths and Reality

A guide through the smokescreen

An unprecedented drive is under way to promote new genetic modification techniques that are collectively termed gene editing – most notably CRISPR/Cas. The agricultural biotech industry claims that these techniques can provide solutions to our food and farming problems, including the challenges posed by climate change, pests, and diseases.

This report looks at the claims and shows them to be at best misleading and at worst deceptive. It shows that gene editing is a costly and potentially dangerous distraction from the real solutions to the challenges faced by our food and farming sectors.
