EU must refuse to authorise new GM maize varieties for cultivation

You can make the difference! Please help us to convince the European Commission.

The European Commission is currently considering the authorisation of two different varieties of GM maize, which have already failed to pass the standard procedure for such applications because of the massive protest by several member states of the European Union. The Commission is in the process of preparing its decisions for submission to Member State governments in Council.

This campaign is seeking to mobilise further support from EU citizens against the authorisation of these GMOs. Consumers should express their concerns about the documented environmental risks of the so-called Bt maize, as well as their desire for GMO-free food, to the Commission. Take this opportunity to send your message to the Commission.

Send a letter to the Commissioners via the Greenpeace website:
