Switch to green power!

Greens/EFA action on the eve of the Kyoto day

To switch on the television or the computer is a daily act which has become a reflex. We almost forget that behind this hides polluting electricity! Almost 2 years after the Kyoto protocol agreement came into force, it is now really urgent to act in order to tackle climate change. By **switching to green electricity** we can all contribute to a climate friendly electricity production!

To mark the Kyoto birthday Green MEPs held an action in the parliament to promote 'green' power.
