Why ban fracking and shale gas?

Shale gas, a form of unconventional gas found in shale reservoirs, is now presented as being the new solution to our world's growing energy needs. However, despite the fact that more and more big businesses are pushing for the development of shale gas accross the world, its production poses serious threats to the climate, the environment and to local communities.

The Greens/EFA group in the European Parliament joined by key European NGOs FOEE, F&W Europe and H & E want to shed light on all the irreversible impacts that could result from the development of this new energy source and call for a immediate ban on fracking and shale gas in Europe... and beyond.
