World energy outlook

Launch of the "Energy [r]evolution" by Greenpeace and EREC

The report shows that renewable energy, combined with efficiencies from the 'smart use' of energy, can deliver half of the world's energy needs by 2050. Moreover this energy revolution can be done while phasing out dirty and unsustainable energy sources like coal and nuclear power.

The report also highlights the short time window for making the key decisions in energy infrastructure and urges therefore the decision makers to drive the world towards this vision.
