12:45-13:00
***Questions and closing remarks***

PROGRAM CONTENT:

Panel I will cover the relatively new concept of data portability and the need for robust patient centric privacy in the eHealth sector. Is the current debate and parliamentary work on the Data Protection Regulation[1] addressing these issues in a way that is meaningful in a real world context? And can the fundamental right to privacy be undermined by so called legitimate interests of large medical institutions, private as well as public? Will a right to data portability help ensure effective privacy? And does Open Standards play a role to achieve that? Panel II will cover the importance of infrastructural choices, and how we can effectively make transparent or open infrastructures through adequate industrial leadership. How do we handle political responsibility in defining the frameworks for those choices within the scope of the eID & eSignature regulation[2], and how do public institutions and publicly elected bodies currently try to address these issues? [1] Personal data protection: processing and free movement of data (General Data Protection Regulation) http://parltrack.euwiki.org/dossier/2012/0011%28COD%29
[2] Electronic transactions in the internal market: electronic identification and trust services, Repealing Directive 1999/93/EC 1998/0191(COD) http://parltrack.euwiki.org/dossier/2012/0146%28COD%29
