Strategic Dialogue on Steel: five actions for a thriving steel sector

As the steel industry in Europe provides employment to hundreds of thousands of workers, and given the importance of the sector to manufacture the technologies for a climate neutral Europe, it is essential that the Clean Industrial Deal provides the tools to modernize, protect and invest in this strategic sector. This is an urgent task that will require concerted EU coordination.

In light of this challenge and the Strategic Dialogue on Steel, we wish to share with you the five main actions that will provide the right conditions for a healthy and future-proof steel sector in Europe, and which we hope will be addressed in the discussions in the coming months leading up the Steel and Metals Action Plan and its implementation.
